## AWR TECHNOLOGY and ASTROMOUNT at IAS14

Thankyou for dropping by and seeing our equipment. We had an interesting show and spoke to many of our existing customers who are perfectly happy with the equipment we have supplied over many years.

NEW on the stand is the **INTELLIGENT HANDSET MK2** which was not quite finished, although well enough to display, as it operates all the menus. Software programming work is proceeding rapidly and we will be ready to ship the first units towards the end of July so have your chequebooks ready!

We are taking orders for the **ASTROMOUNT** with design modifications as discussed with those of you that attended the show. It will perform better than the Losmandy Titan, not as fast as the Paramount but just as stable with smooth tracking which is the main thing. The IH by AWR is actively being worked on and a whole host of new features will come out and you will be included in the updates.

We look forward to your continued business and please recommend us to your colleagues, they can get the same performance with their astronomy equipment as you have.
