

Installation of Rechargeable Battery Pack into the SC110 Mk3

1. Open the lid of the unit by pushing a flat bladed screwdriver into the slot on either side of the box in turn to release a catch.
2. Clip the battery pack onto the PP3 lead coming of the main board.
3. Remove the yellow tape backing from the battery pack
4. Secure the battery pack onto the bottom of the box were there is space making sure it is secure.
5. Check that the clock is running with the pack connected.
6. Place the lid back onto the box making sure that you can hear two clicks as the slots are lined up correctly.
7. If the clock fails to respond to any button then a reset may be needed which means taking out the battery pack, possibly giving the cells a proper charge, then replacing the pack.
